

L-1 MICROCOMPRESSOR

Pot pins color coding
1 - CCW (black)
2 - wiper (red)
3 - CW (blue)

Jack pins color coding
1 - ground (black)
2 - signal (red)

LED pins color coding
1 - anode (+) (red)
2 - cathode (-) (blue)

LEDs: D10, D11 - green, install on PCB
J8 - compression indicator
(lights when signal level exceeds threshold).

For master or mono device install R2=28K7 and omit R43 and R44
For slave device in stereo pair install R2=60K4 and install R43 and R44

Master/slave switch (master = closed)

LORLIN 4P3T
RMS/AUTO/PEAK SWITCH

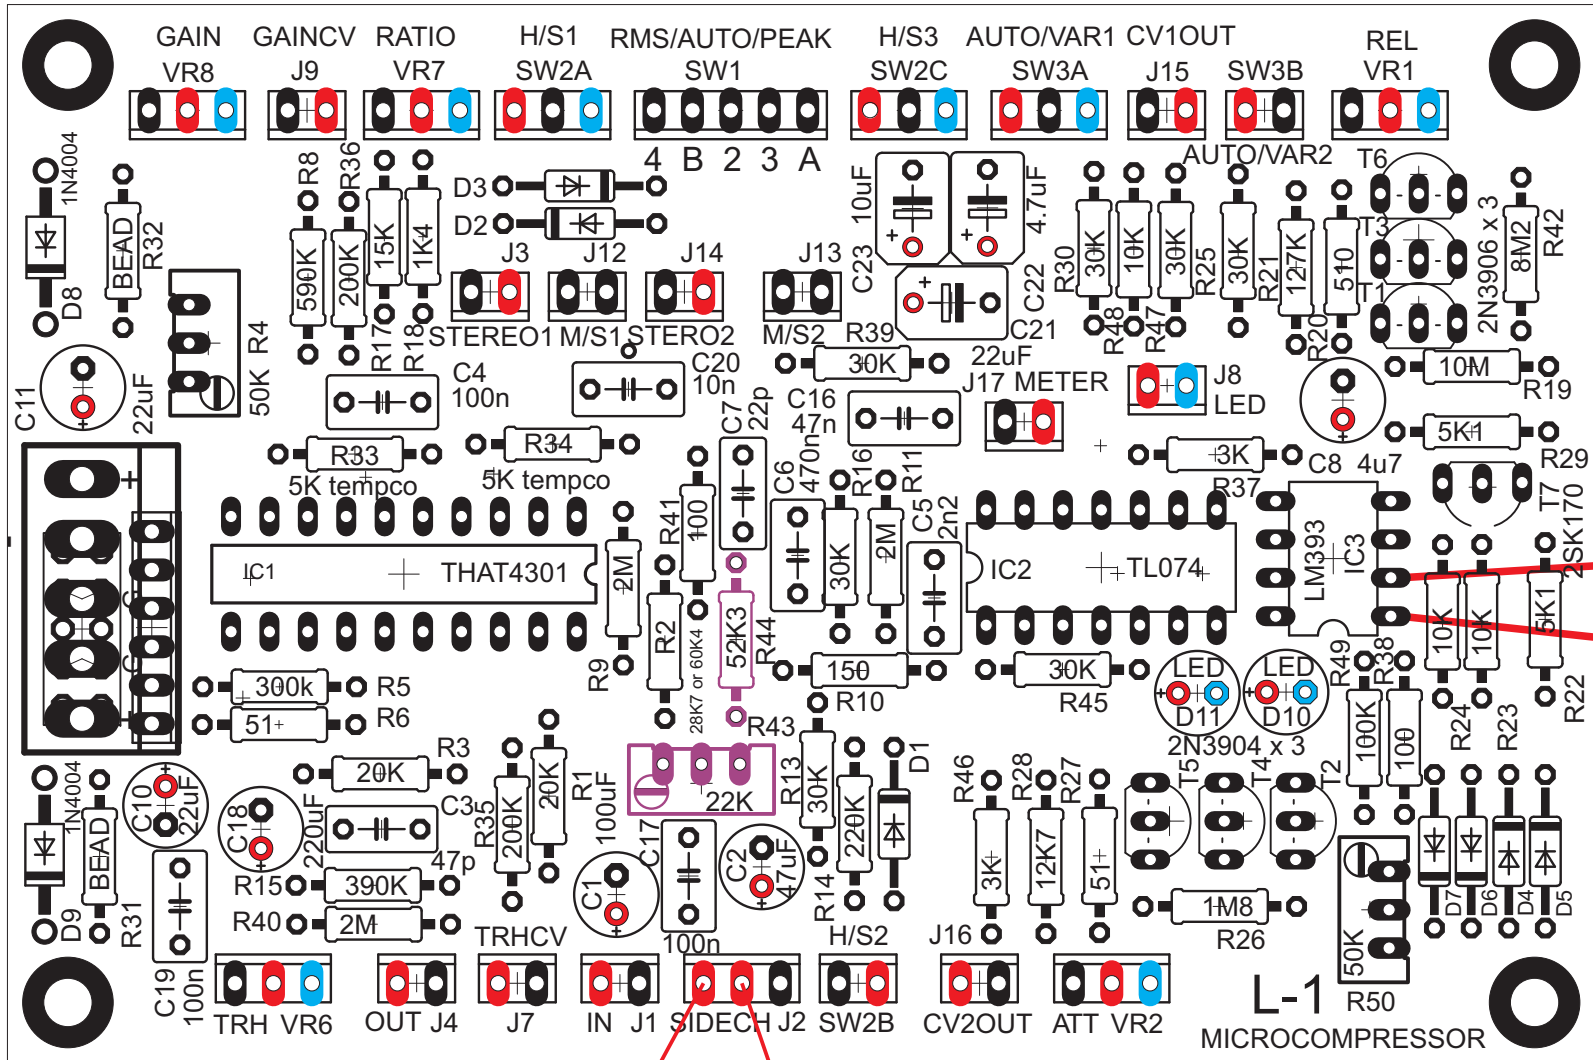

3 - auto
2 - rms
4 - peak

Auto/variable attack & release switch

Hard/soft knee switch

Connect norm pins sidechain receive and send jacks

Trimpots:
R4 - distortion symmetry
R50 - compression indicator
R43 - 0 dB RMS for slave device

POTs:
Makeup gain 50K_lin
Ratio 10K_lin
Attack 10K_lin
Release 50K_lin
Threshold 50K_lin

Modification: On extreme short attack and release in manual mode quit oscillation can be heard.
To avoid this install 22p capacitor between 1 and 2 pins of LM393.
